

Logic as seen by logician

Wojciech Suchoń, Jagiellonian University

Logic has a long history, during which its image has been significantly changed – at least in the eyes of the very logicians. Nowadays its shape is also difficult to grasp, especially for those who have only perfunctory contact with this branch of knowledge. Having in mind the perspective of interdisciplinary collaboration, one may be interested in reflection on what logic is, on what one may expect from it and from cognate disciplines.
